EE201L CAD tool installation on PCs running Windows 7 (64-bit) operating system
(Thanks to Mr. Hoang Le and Mr. Prasanjeet Das for helping with this)

1. The following was tested for the Windows 7 64-bit OS. We believe that it will work for Windows 7 32-bit OS also.

2. To find if your Windows 7 is a 32-bit OS or a 64-bit OS

How can I tell if my computer is running a 32-bit or a 64-bit version of Windows?

3. For Xilinx webpack

3.1 Go to Xilinx_downloads_Spring2009 > webpack > bin > nt folder in the DVD and select "setup.exe". right click it and select properties from the drop down menu as shown in figure below.
3.2 Go to the compatibility tab and make changes in compatibility mode and privilege level as shown in figure below.
4. For Modelsim

4.1 Go to Xilinx_downloads_Spring2009 > mxe_3_6.3c folder in the DVD and select "setup.exe". right click it and select properties from the drop down menu as shown in figure below.
4.2 Go to the compatibility tab and make changes in compatibility mode and privilege level as shown in figure below.
5. For Adept

5.1 Go to Xilinx_downloads_Spring2009 > Digilent_Adept folder in the DVD and select "setup.exe". right click it and select properties from the drop down menu as shown in figure below.
5.2 Go to the compatibility tab and make changes in compatibility mode and privilege level as shown in figure below.

6. Basis of the above procedure

Make older programs run in this version of Windows
